

QUOMATION POWERQUOTE

Comparative Rater

PowerQuote from Quomation delivers industry-leading features and functionality with the most intuitive and user-friendly interface in the comparative rating market.

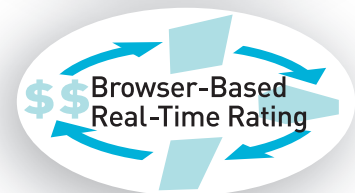

Quomation combines the input from experienced agencies with our own active involvement in the insurance industry to develop the fastest, most accurate personal lines rating software for home and auto available today.

Real-Time Rating

Real Time rating is fully integrated into PowerQuote. Real-time rating instantly communicates the risk information on a client directly to a carrier or multiple carriers and then receives a quote in as little as ten seconds. Why spend a half hour or more manually quoting companies when you can get a real-time quote directly from the company in as little as ten seconds saving you time and money.

Unlike most raters, PowerQuote uses two different real time technologies; XML Real-Time Rating and Browser-based Real-Time Rating. This allows PowerQuote to use the technology that best fits the carrier and their systems. Real-time Rating creates a simple, quick, consistent workflow that significantly reduces the time required to re-enter data for each and every quote.

The Total Solution

PowerQuote leads the industry in the implementation of real-time rating. However, not all of your carriers support real-time rating so, PowerQuote was the first comparative rater to combine three technologies: true Real-Time Rating, browser-based Real-Time Rating and programmed rates with integrated credit. With PowerQuote, you still get all of your carriers quoted with a single entry of data.

And unlike many comparative raters that charge for every carrier and every line of business, PowerQuote includes all of the supported carriers for one low price. No more paying hefty per carrier fees, picking and choosing a limited number of carriers, or surprising surcharges.

Quite simply, PowerQuote combines more rates, from more carriers, faster and more accurately than any other rater available.
